Part I

Week 1

1 The set theory

1.1 Definition of a set

A set is a collection of objects or elements.

Remark: The collection of all sets is not a set.

1.2 Logical symbols

1.2.1 Definition

Braces and the definition symbol ":=" are used to define a set giving all its elements:

$$\boxed{A := \{a, b, c, d, e\}}$$

1.2.2 Equal

In this case, the equal symbol means that the set A is equal to the set B:

$$\boxed{A = B}$$

1.2.3 Belongs to

The symbols $\in$ and $\ni$ describe an element which is part of the set:

$$\boxed{a \in A \Longleftrightarrow A \ni a}$$

1.2.4 Does not belong to

The symbols $\notin$ mean that an element does not belong to the set:

$$\boxed{f \notin A}$$

1.2.5 Inclusion and contains

The symbols $\subset$ and $\supset$ mean that a set has another set included in its set:

$$\boxed{\mathbb{N} \subset \mathbb{Z} \Longleftrightarrow \mathbb{Z} \supset \mathbb{N}}$$

1.2.6 For all/any

The symbol $\forall$ means that we are considering any type of element:

$$\boxed{\forall x \in \mathbb{R},\ x > 0}$$

In this case, we've defined a new set.

1.2.7 Implication

The symbol $\Rightarrow$ means that by setting a rule, we imply an event or an action:

$$\boxed{\text{if } x = 1 \Longrightarrow x \in \mathbb{N}, \text{ but if } x \in \mathbb{N} \text{ we do not know if } x = 1}$$

The symbol $\Leftarrow$ is called inference (it is inferred).

1.2.8 If and only if

The symbol $\Leftrightarrow$ means that two events happen simultaneously (double implication):

$$\boxed{x \in \mathbb{N},\ x \neq 0 \Longleftrightarrow x \in \mathbb{N}^*}$$

Proof: Lets prove that $2x = 10 \Longleftrightarrow x = 5$

$$\begin{aligned} 2x = 10 &\Rightarrow x = 5 \\ \frac{2x}{2} &= \frac{10}{2} \\ x &= 5 \end{aligned}$$

1.3 Numerical sets

- $\mathbb{N} :=$ Natural numbers (including 0);
- $\mathbb{Z} :=$ Integer numbers;
- $\mathbb{Q} :=$ Rational numbers;
- $\mathbb{R} :=$ Real numbers $:= \mathbb{Q} \cup \{\text{irrational numbers}\}$.

Notation: The "*" symbol means that the set does not include 0.

1.3.1 Inclusion of sets

$$\boxed{\mathbb{N} \subset \mathbb{Z} \subset \mathbb{Q} \subset \mathbb{R} \subset \mathbb{C}}$$

$B := \{\pi, 1, -1, 0\}$;
$C := \{\pi, 1\}$;
$D := \{\pi\}$.

Then we write some examples: $\pi \in B,\ D \subset B,\ C \subset B,\ B \not\subset C,\ 0 \in B,\ 0 \notin C$.

2 The real line
